Capacity Management Discharge List Cleanup

An issue was identified in Capacity Management where outpatients for procedures or same day surgeries were displaying on the Discharge List erroneously well after they were discharged and gone from the hospital.

A fix has been identified and implemented. A work effort is underway to clean-up the old discharges that should not have qualified for the Discharge List.

Soon you will notice the Discharge List displaying only current discharges as appropriate. If further issues are noted with patients erroneously displaying after the next few weeks have passed and clean-up has been completed, please call the help desk, or log an issue on the IT Portal so it can be investigated and addressed.
