## Ambulatory: Resolution for In-Office Specimen Collection Issue

### Resolution for In-Office Specimen Collection Issue Overview

**Effective Today:** The venipuncture order that generates for in-office specimen collection is now working as designed.

**Resolution:** The rule that automatically generates the venipuncture order/task has been corrected so the order/task is tied to the FIN the orders are being activated/drawn on. **This will ensure the charge is applied to the correct encounter.**

**CLINICS WILL STOP USING THE INTERIM WORKFLOW THAT WAS IN PLACE WHILE THIS ISSUE WAS BEING FIXED EFFECTIVE TODAY 11/2.**

**Recap of Issue:** The venipuncture order/task that automatically generates when blood specimen orders are activated in Cerner PowerChart was associated to the incorrect FIN.

Please reach out to the Cerner Training Team at [mmgcernertraining@mcclaren.org](mailto:mmgcernertraining@mcclaren.org) with patient examples if you see any further issues.
