## Clinical Frailty Scale Auto Text with Dropdown Selection

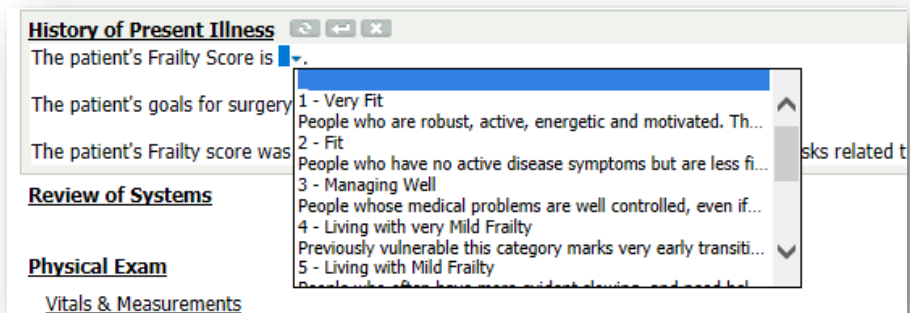

The [Clinical Frailty Scale](#) is an evidence-based and easy to use tool utilized in the determination of the degree of disability due to frailty prior to interventions and treatments. This tool is frequently used by clinicians in the evaluation of a patient's frailty. The Clinical Frailty Scale is now available in Auto Text with dropdown selection to select scale assessment.

New auto text has been developed to capture the Clinical Frailty Scale through a dropdown selection within the document.

Type `.frailtyscore` in the document to populate the auto text.

The Clinical Frailty Scale documentation populates with dropdown selections for the scale assessment:

You can type or dictate the patient's goals:
