

Urinary Catheter Care Documentation - Patient Care Tech

Impacted Areas: All Inpatient Care Areas with Patient Care Techs

We have enhanced the documentation for the Patient Care Tech (PCT) position to allow for them to be able to document Catheter Care in the Management section of Indwelling Urinary Catheter and Urine External/Suprapubic/Intermittent.

When the nurse creates a dynamic group in the Indwelling Urinary Catheter or Urine External/Suprapubic/Intermittent Bands and documents in the Management section, it will become available for the PCT to complete future documentation. Within the dynamic group documentation, Management will be the only shared section and the only section a PCT can see or document in. This field should be used to document Catheter Care when performed.

- PCT Position will have the documentation options available and be able to view the nurse documentation for Management only as seen below.
