Order Reconciliation Window Update for Midwife Position

Order Reconciliation Window Update Overview

Provider Position Impacted: Midwife

Change effective Today: For Providers in a Midwife position in Cerner, when performing medication reconciliation via their Workflow Pages, the **Continue After Reconcile** radio button will no longer be automatically defaulted for medications in the **Order Reconciliation** window. This change will align the Midwife position with how the Order Reconciliation window functions for other Provider positions.

Prior to this change: The **Continue After Reconcile** radio button was defaulted for all medication listed in the **Order Reconciliation** window. This disabled the **Acknowledge Remaining Home Meds** and **Do Not Continue Remaining Orders** buttons within the window.
