New “PAT Testing” Powerplan Perioperative Surgeons/Offices and Proceduralist entering in Orders for Pre-Procedure Screening to be performed prior to the day of surgery

To help streamline the order entry process for entering in specific pre-screening labs and diagnostic testing, we have introduced a new Powerplan which will be available starting November 10th, 2021 called “PAT Testing”

The “PAT Testing” Powerplan is designed to be in **addition to** and **SEPARATE** from the Anesthesia Testing Guidelines to be performed PRIOR to the date of surgery. This **DOES NOT REPLACE** the PAT phase of the existing surgical powerplans as that covers patient instruction and orders the “Routine Pre-Procedure Testing” which directs prescreening required by Anesthesia.

A provider can order, or office can propose this plan by selecting “PAT Testing” in the Orders Menu

This plan works like other Powerplans in that it can be saved as a favorite by providers with specific orders pre-checked.

The biggest difference between this powerplan and the existing surgical powerplans is that the PAT Testing plan is a single phase and if you notice the green banner bars—a diagnosis must be added to each order entered on this plan (because these will be performed as Outpatient Dx Testing Visits).

Please review the education providing surrounding ordering this powerplan prior to utilizing it.
