Pathology Orders

During the PathNet conversion, you will see both the MLab and the new PathNet pathology orders. Please make sure to select the appropriate order. PTHSURG-Path Surgical (M) should be used prior to June 3, 2023.

The screenshot shows a Cerner interface with a left-hand navigation pane and a main content area. The navigation pane is titled "Orders for Signature" and includes a tree view with "Plans" expanded to "SURG Perioperative Phased". The main content area displays a table of orders under the heading "SURG Perioperative Phased, Intraop Labs (Planned Pending)". The table has columns for "Component", "Status", "Dose...", and "Details". The table lists three items: "Laboratory", "Pathology - Tissue or Biopsy Specimen (Surq)", and "PTHSURG-Path Surgical (M)". A blue callout bubble points to the "PTHSURG-Path Surgical (M)" row with the text "Use this Pathology order until 6/3/2023". A red callout bubble points to the "Pathology - Tissue or Biopsy Specimen (Surq)" row with the text "Do not use except for cases/orders scheduled ON or AFTER 6/3/2023".

Component	Status	Dose...	Details
Laboratory			
Pathology - Tissue or Biopsy Specimen (Surq)			
PTHSURG-Path Surgical (M)			
OR Blood Products
