

# Pathology Specimen Collection

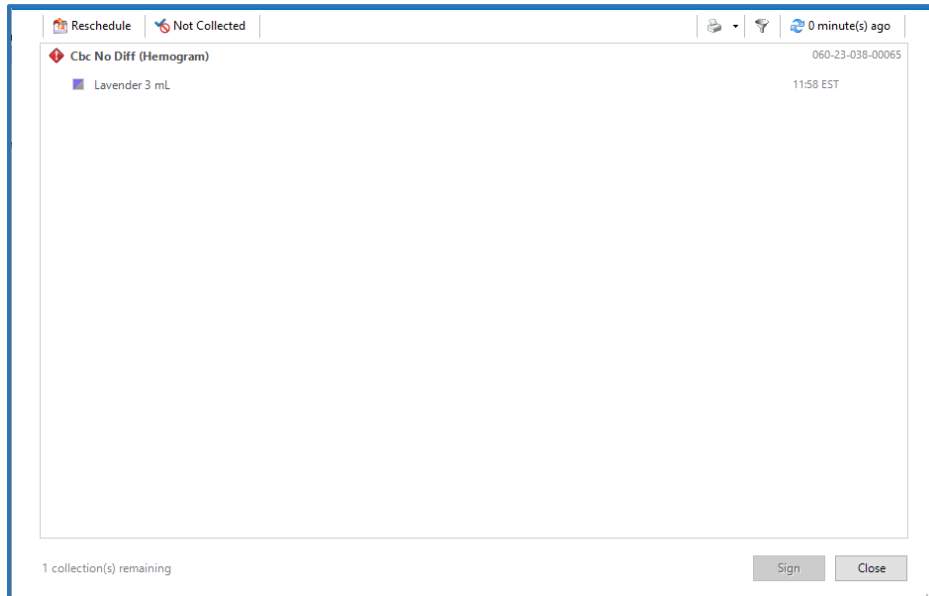

## PathNet Workflow

### Provider:

- ✓ Order the appropriate Specimens Order/PowerPlan based on specimen type (pathology tissue request, microbiology, etc.)
- ✓ Select each order individually and enter specimen specific data (e.g., description)
- ✓ Initiate order if the Pathology need is now, if not place in a Planned State.
- ✓ Sign orders

### Clinical Staff Collecting Specimen:

- ✓ Open  application through Nurse Collect task or select the Specimen Collections Component from the activities list
- ✓ Perform positive patient identification by scanning the patient's armband
- ✓ Review Specimen Collection Details and Container information

- ✓ Print specimen label within room printer or mobile printer (depending on site)
  - a. Right click on the container, select print, print label
  - b. If more than one specimen, you may go to the printer in the top right corner to print all labels at once.

- ✓ Collect and label specimen
- ✓ Perform positive order identification
  - a. Was specimen collected?

- i. If yes, scan the specimen label to automate it to collected. You may manually mark it collected or change the collection container by utilizing the right-hand side action bar associated to that order.
- ii. If no, utilize the right-hand side action bar to reschedule

- ✓ Complete documentation by signing the collection

- ✓ Pathology specimens require a printed requisition upon receipt
  - a. Right click on the container, select print, print requisition

- ✓ Send labeled specimen(s) with their requisitions to Pathology.
