Meal (Diet) Orders – Patient Appropriateness

- Meal designation options are to be determined by nursing or providers based on patient appropriateness.
- Options:
  - *Call In*: Patient independent with ability to call to place order for meals. Meals are provided when ordered; *meals are not automatically provided.*
  - *Non-Select*: Patient not able to place own meal orders**. Meals will be automatically provided based on diet ordered.**
  - *Phone Assist*: Patient needs cueing/assistance from nursing staff to place meal orders. Meals are provided when ordered; *meals are not automatically provided.*
  - *Room Assist: Do Not Use at Macomb location. Utilized for a different meal service program style.*
- Default patient appropriateness designation for Macomb is "Call-In"
- When patients need to have alternative meal service style designation, nursing will need to change level of service options in the Diet Order under "Patient Level of Service" dropdown box options. (see screen shot below).
