Take Home Medications Upon Discharge

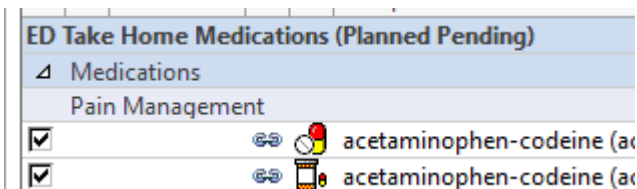

Impacted Areas: Emergency Department / Nursing and Providers

Emergency Provider searches for "ED Take Home Medications" Power Plan from either Quick Orders or Orders band in mPage.

Power Plan includes four of the most common send home medications. Each order is linked to include the medication order and prescription. Order component prompts nursing to remove medication pack from the Omnicell and will populate a medication task in the Activities column. The prescription component is for compliance and allows for the medication to populate on the discharge instructions. ****No prescription actually prints****
